

ACORDE TECHNOLOGIES

HALL 7 STAND G3-03

ACORDE designs and develops equipment and high technology systems for communications in the most inaccessible environments.

Its members have over 10 years of experience providing customized solutions for the most demanding customers, developing new technologies and conducting advanced research work in many fields such as satellite communications, GNSS, e-Health, environmental monitoring, etc.

One of the sectors in which ACORDE has earned international recognition for the reliability and performance of its developments is the equipment and satellite communications systems for both commercial and military use. ACORDE has also developed customized versions of equipment for UAVs and submarines, with extreme environmental conditions, or even autonomous satellite communications systems in high mobility ground vehicles and high-speed trains.

Within the areas of knowledge of ACORDE it is also included software and control electronics development, which goes from home automation control services based on wireless sensor networks for intelligent homes, to software control installed on satellites, going through environmental and industrial monitoring.
