ALBIRAL DISPLAY SOLUTIONS is a Spanish company that has been active in the market as a manufacturer of professional broadcast monitors since 1994. Head quartered in Catalonia, Spain, it has sales offices in Madrid and Barcelona and a network of international distributors.

Albiral will be presenting its EYEPREVIEW product line at IBC, which comprises HD-SDI, SD and SDI rack monitors, as well as monitors for Teleprompter and for View finder applications. The company has focused its strategy in technology innovation, and it was awarded because of its innovative product policy by the Chamber of Commerce of Barcelona in 2006.

The EYEPREVIEW HD-SDI product range obtained the Prize MAC Technology 2008 sponsored by ABERTIS TELECOM, and addressed to a Project bringing technology innovation.

ALBIRAL DISPLAY SOLUTIONS provides high quality professional HD-SDI and SD preview monitors, single and multiple rackable monitors.

The company offers a wide single and multiple rackable product range, which is probably the most competitive broadcast monitor line in the market, when it comes to price and quality, and an innovative range of HD-SDI monitors. Furthermore, ALBIRAL is well known for its capability to customise products according to the customers needs.

The EYEPREVIEW monitors are used by ITV, RAI, Spanish Television, Swedish Television, Mexican Television and France 2 among others.

The rackable EYEPREVIEW product line provides features such as high resolution, wide dynamic viewing angles and the capability of handling various inputs, together with a robust design and hand-built iron housing and has gained a great reputation throughout the world.

As new products presented at IBC, it is worth mentioning the new racks with 16:9 panels. Albiral presents a double 7", a double 8.4" and a triple 5.6", all of them with 16:9 screens and with both CVBS and SDI inputs. A new rack with 4" 16:9 screens is also being designed at this moment and will be soon available.

As a new product, ALBIRAL will also present a new double 8.4" rack, with HD-SDI input, underscan/overscan, PIP, 4:3 and 16:9 format selection and capability to adjust the colour temperature.

The EYEPREVIEW HD-SDI product range provides direct access to the input selection between two HD-SDI, CVBS, VGA and Component. Furthermore, it provides functions such as PIP, text generator, Underscan/Overscan, 4:3 and 16:9 format selection, backlight adjustment and colour temperature adjustment.

The HD-SDI product range is available in 17, 24 and 37".

As an example of customised product, an 8.4" Albiral monitor has been approved for military applications after being submitted to shock tests, starting at 10 g with a pulse duration of 20 ms, and incrementing in 2 g steps until a maximum of 27 g was achieved. The product passed the tests thanks to its mechanical and electronic robustness and special features.

Other specific projects includes monitors for outdoor application and high brightness monitors.
