---

*Madrid, 10. of October 2008.-* **Wireless ZT**, spanish mobile data system and solution provider supplies PoC (Push-to-Talk over Celular) to following GSM operators UTS from Caribbean, UFone from Pakistan, Smartone-Vodafone from Hong Kong and MTN from Syria.

Thru this system UTS, UFone, Smartone-Vodafone and MTN have new voice service to their end users, Walkie-Talkie voice service. End users can realize 1-to-1 or 1-to-Group calls with a technology that utilizes data layer capacity of the GPRS/Edge/3G networks making voice calls based on IMS VoIP.

**Wireless ZT** takes steps towards IMS solutions that represent future technology of the mobile networks.

UTS, UFone, Smartone-Vodafone as well MTN, offers PoC services mainly to corporate sector. PoC system represents effective voice solutions in countries that lack frequencies, coverage or investments on private radio systems but also provides interesting new opportunity to GSM operators to compete on such services and also permits them to start recover data investments.
