

PRODUCTS TO EXHIBIT AT BROADCAST ASIA 2009

Our stand will be mainly dedicated to display the advanced solutions that Televes can provide for the reception of Digital TV signals transmitted Off air or via Satellite. We will be exhibiting our latest developments of DVB-S2, QAM and COFDM Transmodulators, technology where Televes remains as the market leader and world largest manufacturer.

We will also exhibit our range of Digital Channel Processors, IF/IF Channel Processors, T-03 range of Channel Amplifiers and our comprehensive range of Broadband Amplifiers. All models incorporate the possibility of being Remotely Controlled by modem or over the Internet. Monitoring and modifying the configuration of a headend, from any location in the world, is now a simple task using our Headend Management Control System.

At Broadcast Asia we will also release our new range of Field Strength Meters, the H45 model with Digital Processing. It is the fastest and more precise instrument in the market. Developed exclusively by Televes, it responds to all the installer's needs. It has been designed to obtain all the information instantaneously from the signal by the development of a mathematical algorithms. Up to 20MHz digitally captured in less than 10ms. It offers real time sweeping speeds with unprecedented preciseness.

To complement the Televes' digital solutions we will also exhibit our range of Indoor and Outdoor Digital COFDM Gap Fillers. Televes has developed these range of equipment for the fast growing market of Digital Terrestrial Television.
